

AMENDMENTS TO THE SPECIFICATION:

Page 1, replace paragraph 2 (beginning at line 11), as follows:

A known conventional ball-hurling machine 10 shown in Fig. 1 includes a body 101, a tripod 102 supporting the body 101 that is able to sway up and down and right and left, a power switch 1011 provided in the body 101, and a ball outlet 1012 formed in a front side of the body 101.

Page 3, replace the last paragraph (bridging pages 3 and 4), as follows:

The ball-hurling machine 1 has a body 11 placed on a tripod 12 and it is possible for the ball-hurling machine 1 to sway up and down and right and left minutely, a ball outlet 111 formed in a front side wall and ball-hurling mechanism (not covered in the invention). Further, the body 11 has a wireless receiver 13 and a display 14 positioned on the body 11. The wireless receiver 13 controls the power of the ball-hurling machine 11 and the modes of the balls shot out, and the display 14 showing the images of the modes of balls to be hurled with different colors.
